

Books To Scrape Web Scraping

Objective

This project demonstrates how to extract book information from the **Books To Scrape** website using **Python**, **Requests**, and **BeautifulSoup**. The scraped data includes book title, price, rating, availability, and image URL.

🔧 Technologies Used

-  Python
-  Requests
-  BeautifulSoup
-  Pandas

```
In [1]: import requests
        from bs4 import BeautifulSoup
        import pandas as pd
```

```
In [2]: url = "https://books.toscrape.com/"

        headers = {
            "User-Agent": "Mozilla/5.0"
        }

        response = requests.get(url, headers=headers)

        print("Status Code:", response.status_code)
```

Status Code: 200

```
In [3]: soup = BeautifulSoup(response.text, "html.parser")

books = soup.find_all("article", class_="product_pod")

print("Total Books Found:", len(books))
```

Total Books Found: 20

```
In [4]: data = []

for book in books:

    title = book.h3.a["title"]

    price = book.find("p", class_="price_color").text

    rating = book.p["class"][1]

    availability = book.find_all("p")[1].text.strip()

    image = book.find("img")["src"]
    image = "https://books.toscrape.com/" + image.replace("../", "")

    data.append({
        "Title": title,
        "Price": price,
        "Rating": rating,
        "Availability": availability,
        "Image": image
    })
```

```
In [5]: df = pd.DataFrame(data)

df.head()
```

Out[5]:

```
In [7]: df.to_csv("books_data.csv", index=False)
print("CSV file saved successfully.")
```

CSV file saved successfully.

Conclusion

Successfully scraped book details from the **Books To Scrape** website. The extracted information includes:

- 📖 Book Title
- 💰 Price
- ⭐ Rating
- 📦 Availability
- 🖼️ Book Image URL

The extracted data was stored in a **Pandas DataFrame** and exported to a **CSV file** for further analysis and future use.
