

Hacker News Web Scraping

Objective

This project demonstrates how to scrape the latest news articles from **Hacker News** using **Python**, **Selenium**, and **Chrome WebDriver**. The scraper extracts the news title, points (score), and article link.

🔧 Technologies Used

-  Python
-  Selenium
-  Chrome WebDriver
-  Pandas

```
In [9]: from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.chrome.service import Service
from webdriver_manager.chrome import ChromeDriverManager

import pandas as pd
import time
```

```
In [10]: options = webdriver.ChromeOptions()
options.add_argument("--start-maximized")

driver = webdriver.Chrome(
    service=Service(ChromeDriverManager().install()),
    options=options
)
```

```
driver.get("https://news.ycombinator.com/")  
  
time.sleep(6)
```

```
In [11]: rows = driver.find_elements(By.CSS_SELECTOR, "tr.athing")  
  
print("Total News Articles Found:", len(rows))
```

Total News Articles Found: 30

```
In [12]: news_data = []  
  
for row in rows:  
  
    try:  
        title_tag = row.find_element(By.CSS_SELECTOR, "span.titleline a")  
  
        title = title_tag.text  
        link = title_tag.get_attribute("href")  
  
        points = "0 points"  
  
        try:  
            subtext = row.find_element(By.XPATH, "following-sibling::tr[1]")  
            score = subtext.find_elements(By.CSS_SELECTOR, "span.score")  
  
            if len(score) > 0:  
                points = score[0].text  
  
        except:  
            points = "0 points"  
  
        news_data.append({  
            "Title": title,  
            "Points": points,  
            "Link": link  
        })  
  
    except:  
        pass
```

```
In [13]: df = pd.DataFrame(news_data)
```

```
df.head()
```

Conclusion

Successfully scraped the latest articles from **Hacker News** using Selenium. The scraper collected valuable information including article titles, points (scores), and links.

- 📄 News Title
- ★ Points (Score)
- 🔗 Article Link

The extracted data was organized into a **Pandas DataFrame** and exported as a **CSV file** for further

analysis and reporting.
